

UK's premier supplier of Engineering Solutions, Products and Services

Creative's range of vacuum instruments provides solutions from intelligent transducers through to advance vacuum controllers.

Hand-Held Vacuum Metres and Data-loggers

A range of versatile compact battery powered hand-held digital vacuum metres with data-logging facilities and optional infrared interface. Four models are available that cover a range of vacuum measurements from rough vacuum 5×10^{-4} mBar. VacuGraph is a Windows based software package that analyses and graphs the data-logging information.

Vacuum Controllers

The DC1 family of programmable vacuum/distillation controllers are compact units with integrated venting valves and provide voltage supply and control outputs for an external vacuum valve. In addition the DC1 model incorporates a continuous valve for venting and direct vacuum control. VacuGraph software can save and plot the controller measurements.

Vacuum Transducer and Sensors

The VS range of Piezo and Pirani transducer and sensors offer a wide measurement range from rough vacuum through to 1×10^{-4} mBar. Different features ensure there is a product that meets the performance and cost criteria for most industrial applications.

Vacuum Display and Control Units

The Thyracont vacuum display and control units provide a range of display options, both digital and bar-graph, with measurements down to 1×10^{-9} mBar. The units can be panel, rack or bench-top mounted and have options for set-points, profiles and log and

VacuGraph Software

VacuGraph analyses and graphs that data-logging information from the hand-held vacuum meters and vacuum controllers.

Adjustable Vacuum Switch

This general purpose vacuum switches enables user adjustment of a vacuum switch point. It incorporates a small switching differential with a set point range of 30-1000 mBar. The switch can be supplied with normally open or normally closed switch points and all wetted parts are manufactured in corrosion resistant material.
